

Kleresca®

# NO MORE HIDING

Using fluorescent light  
energy to treat acne

## DISCOVER A NEW BIOPHOTONIC TECHNOLOGY

Kleresca® Acne Treatment is a non-invasive biophotonic treatment using fluorescent light energy (FLE) to stimulate the skin's own repair mechanisms<sup>1,7-9</sup>. The process is known as photobiomodulation (PBM), a new mode of action in the field of dermatology care.

Indicated for the treatment of inflammatory acne, including moderate to severe cases<sup>1-4</sup>.

## LONG-LASTING EFFECTS

Kleresca® Acne Treatment consists of a patented multi-LED lamp designed with specific, pre-programmed wavelength settings and a specially formulated photoconverter gel.

Patients should see noticeable improvements in their complexion during the last weeks of treatment which shall continue for months after the treatment has ended. This is due to the activation of the deeper layers of the skin with the repairing continuing after the treatment has ended<sup>1-4,7</sup>.

## MULTI-ACTION TREATMENT

Kleresca® Acne Treatment works as a multi-action treatment, addressing several factors of acne pathogenesis while reducing signs of scarring<sup>1-5,7</sup>:

- Targeting *P. acnes*
- Reducing inflammation and normalising cellular activity
- Reducing the signs of scarring by building-up of collagen

INSPIRED BY  
PHOTOSYNTHESIS

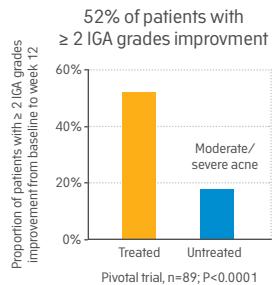

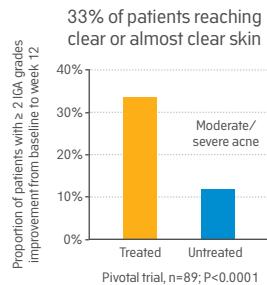

WORKS AT  
CELLULAR LEVEL

MULTI-ACTION  
TREATMENT

## HIGH SAFETY AND EFFICACY

Kleresca® Acne Treatment demonstrates high efficacy and safety<sup>1-4</sup>

- 89% of response rate (patients  $\geq 1$  IGA\* grade improvement)<sup>4</sup>
- No serious adverse events reported. No adverse events leading to study discontinuation<sup>2-4</sup>
- Adverse events were transient in nature and did not require any intervention by the investigators<sup>2-4</sup>
- Side effects seen include redness, hyperpigmentation (bronzing of an area of the skin) and slight discolouration of hair<sup>2-5</sup>
- Persistence of efficacy in the clinical trial has been demonstrated for at least 6 months<sup>3,4</sup>. Experience from current clinics using Kleresca® Acne Treatment show that persistence can last for a year.

\*IGA: Investigator's Global Assessment Scale for Acne Severity

## KLERESCA® ACNE TREATMENT FOR YOUR PATIENTS

Kleresca® Acne Treatment was developed with the needs of the patient in mind.

- Designed to help patients restore their complexion and feel good about their skin
- Non-invasive biophotonic treatment, non-systemic and non-abrasive<sup>1-7</sup> - with a long-lasting effect<sup>1,3,4</sup>
- Pleasant and comfortable<sup>1-5</sup>
- Little to no downtime<sup>1-5</sup>

---

## KLERESCA® ACNE TREATMENT FOR YOUR CLINIC

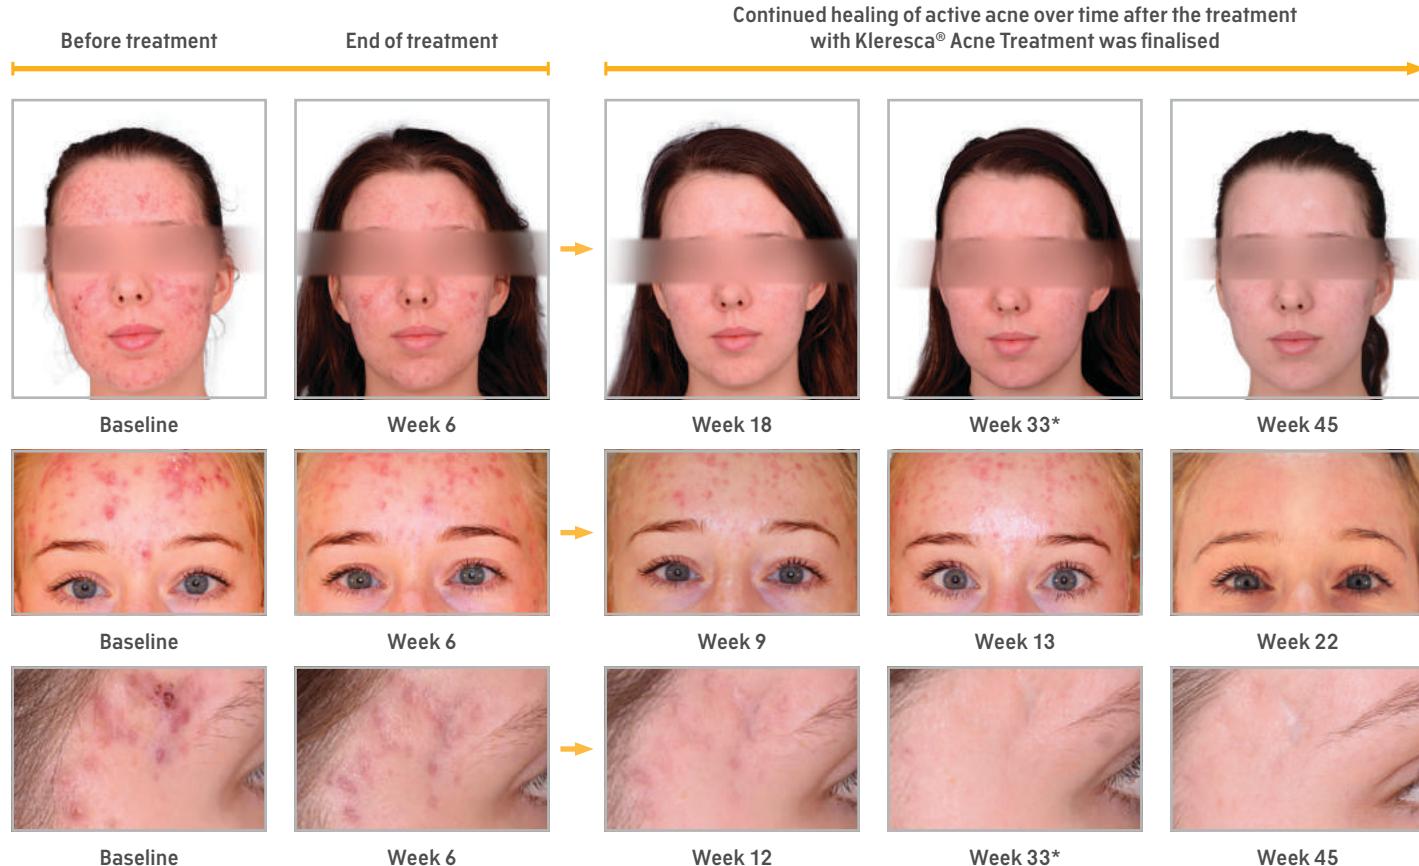

- Easy to use and administer and can be performed by trained healthcare professionals, including nurses and clinical assistants
- Minimal staff support or patient monitoring is required
- Kleresca® is your dedicated partner – there are no maintenance fees or binding service contracts
- Reach out to your local contact who will answer all your questions

Kleresca®

# KLERESCA® PRE-POST TREATMENT

For optimal results

## KLERESCA® PRE-POST TREATMENT

Invasive skin treatments are known for delivering good results, but they can cause adverse side effects such as erythema, scaling of the skin, pain and swelling<sup>9-11</sup>.

Kleresca® Pre-Post Treatment is a non-invasive<sup>1-5</sup> biophotonic procedure designed to prepare the skin before any high-energy or abrasive treatments and stimulate its own healing mechanisms once the treatment has finalized<sup>6,7</sup>.

Kleresca® Pre-Post Treatment can be used in conjunction with other non-invasive or invasive techniques providing an improved recovery for the patient and an optimal outcome<sup>6,7</sup>.

Kleresca® Pre-Post Treatment will help you to provide the complete experience for your patient<sup>6,7</sup>:

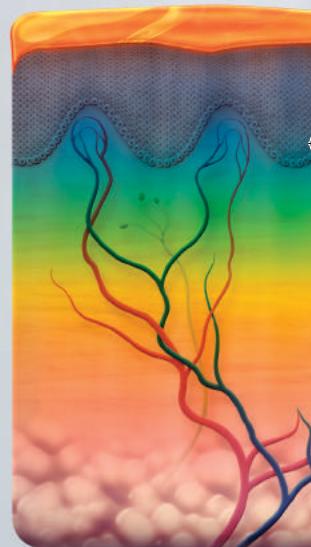

- Prepare the skin to obtain the best response
- Improved recovery and serves as a final touch

The treatment provides documented benefits for the skin that goes under an invasive treatment<sup>1-6</sup>:

- Reduces inflammation and erythema
- Normalises and de-stresses the skin
- Skin cell activation and induction of regenerative processes
- Increases collagen build-up

Chromophores in the gel convert light waves from the lamp into fluorescent light energy

## CHANGING DERMATOLOGY THROUGH FLUORESCENCE

Kleresca® biophotonic treatments are based on a new dermatological mode of action that creates fluorescent light energy (FLE) to stimulate the skin's own biological processes and repair mechanisms<sup>1,3,8</sup>.

The mode of action of the treatment, inspired by photosynthesis, is based on the interaction between the Kleresca® photoconverter gel and the blue light from the Kleresca® Lamp<sup>7</sup>.

The photoconverter gel facilitates the conversion of the blue light wavelengths from the Kleresca® Lamp into fluorescent light energy (FLE)<sup>7</sup>.

These wavelengths have the capacity to penetrate various depths of the skin and to stimulate skin tissues and cells for the normalisation and de-stressing of the skin<sup>3</sup>.

## HOW THE TREATMENT IS PERFORMED<sup>7</sup>

The skin is cleaned and  
Kleresca® Pre-Post  
Treatment gel is applied.

The gel is illuminated for nine  
minutes using the multi-LED  
Kleresca® lamp, together  
creating fluorescent light  
energy that stimulates the skin.

The gel is removed and  
the skin is cleaned and  
moisturised.

## BENEFITS FOR YOUR PATIENTS

At Kleresca®, we aspire to transform the way skin is treated. Our innovative biophotonic platform creates a mode of action unique in the field of dermatology.

Kleresca® Pre-Post Treatment was developed with the needs of the patients in mind.

- Prepare patient's skin BEFORE an invasive technique in order to achieve the best response<sup>1-6</sup>
- Improved recovery and reduction of side effects AFTER the utilisation of an invasive treatment<sup>4</sup>
- Non-invasive biophotonic treatment, non-systemic and non-abrasive<sup>1-6</sup>
- Pleasant and comfortable<sup>1-6</sup>

## HIGH SAFETY PROFILE WITH ONLY TRANSIENT SIDE EFFECTS

Kleresca® Pre-Post Treatment has a high safety profile. Side effects - seen in some patients - are all transient and may include redness, swelling and hyperpigmentation (bronzing of an area of the skin)<sup>1,2,4-6</sup>.

Side effects impact patients differently - if at all - so we always recommend talking to your patient before beginning treatment.

## A COMPLETE TREATMENT FOR YOUR PATIENT

Combining Kleresca® Pre-Post Treatment with the abrasive or high-energy treatments required, you can now provide your patients with a complete solution. You can target the dermatological condition while improving the overall skin quality at the same time.

- A pleasant and comfortable treatment<sup>1,2,4-6</sup>
- Little to no downtime<sup>1,2,4-6</sup>
- Long-lasting, noticeable improvements of the skin<sup>3-4</sup>

INSPIRED BY  
PHOTOSYNTHESIS

STIMULATES SKIN  
AT CELLULAR LEVEL

REDUCES  
INFLAMMATION

## A COMPLETE TREATMENT FOR YOUR PATIENT

Prepare the skin with Kleresca® Pre-Post Treatment before any invasive treatment in order to obtain the best and finest response<sup>6,7</sup>.

## IMPROVE RECOVERY

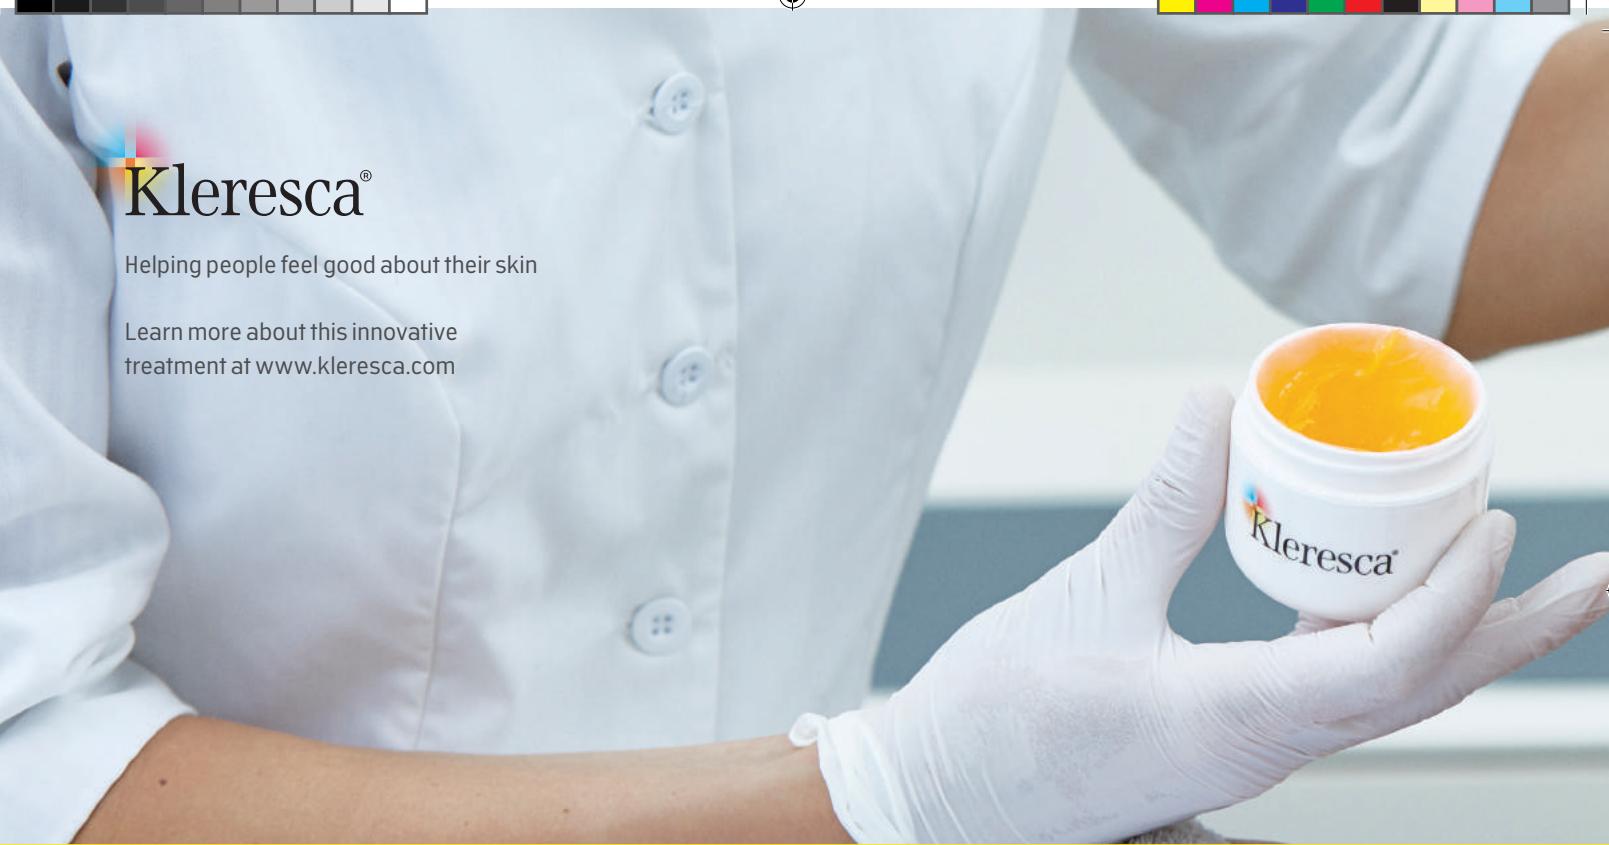

After a high energy or invasive treatment, help skin obtain an improved recovery with Kleresca® Pre-Post Treatment and give your patient the best final result<sup>6,7</sup>.

Kleresca®

# KLERESCA® ROSACEA TREATMENT

Feel the change

## KLERESCA® ROSACEA TREATMENT

Kleresca® Rosacea Treatment is a non-invasive treatment that uses fluorescent light energy (FLE) to reduce the signs and symptoms of rosacea<sup>1-8</sup>.

The treatment is based on the principle of biophotonics: the use of fluorescent light energy to stimulate the skin's own repair mechanism<sup>7-9</sup>.

### THE NEEDS OF YOUR PATIENTS IN MIND

Kleresca® Rosacea Treatment has been designed for those suffering from rosacea signs and symptoms, offering:

- A gentle treatment with little to no downtime<sup>1-8</sup>
- Demonstrated high safety and efficacy<sup>1-6</sup>
- Targeting of rosacea signs and symptoms<sup>1-3,7</sup>
- Overall improvement of skin quality<sup>1-7</sup>

INSPIRED BY  
PHOTOSYNTHESIS

STIMULATES SKIN  
AT CELLULAR LEVEL

REDUCES  
INFLAMMATION

Discover a pleasant and non-invasive experience for the treatment of rosacea

## THE DIFFERENCE IS IN THE FLUORESCENCE

The biophotonic platform utilises the interaction between a specially designed gel and the Kleresca® light. Chromophores in the gel convert the light waves from the lamp into fluorescent light energy that stimulate the skin at a cellular level<sup>7-9</sup>.

## TARGETING ROSACEA<sup>1,2</sup>

Kleresca® Rosacea Treatment targets the signs and symptoms of rosacea by improving vascularisation in the treated area as well as reducing inflammation and redness.

Your patients should feel relief not only with the visible symptoms of rosacea but also in the sensations related with this skin disorder.

Kleresca® Rosacea Treatment is seen to reduce the overall stress level of the skin, thereby reducing the feeling of burning and stinging<sup>7</sup>. The biophotonic treatment induces a healing response, improving the overall skin quality<sup>1-7,9</sup>.

## A COMFORTABLE AND PLEASANT TREATMENT<sup>8</sup>

The skin is cleaned and Kleresca® Rosacea Treatment gel is applied.

The gel is illuminated for nine minutes using the multi-LED Kleresca® lamp, together creating fluorescent light energy that stimulates the skin.

The gel is removed and the skin is cleaned and moisturised.

## REAL LIFE RESULTS<sup>1,2</sup>

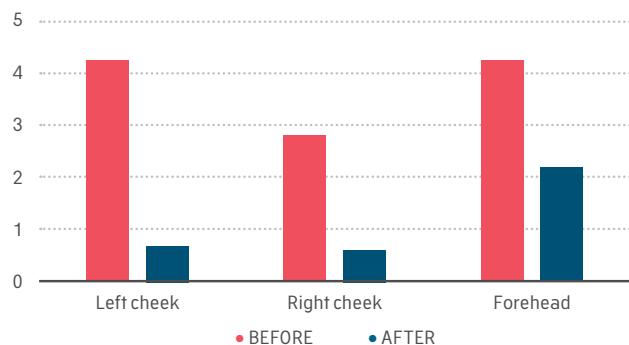

Rosacea patients treated with Kleresca® experienced an improvement in different areas:

- Reduction of inflammatory reaction
- Reduction in the number of papules and pustules
- Overall improvement of the skin

Individual results may vary.\*

Percentage of facial area with inflamed lesions in rosacea type II

## HIGH SAFETY PROFILE<sup>1-7</sup>

Kleresca® Biophotonic treatments have a high safety profile. Side effects - seen in some patients - are all transient and may include redness, swelling and hyperpigmentation (bronzing of an area of the skin).

## FEEL THE CHANGE

Kleresca® Rosacea Treatment is a gentle and non-invasive treatment<sup>1-8</sup>. It has been designed to be well tolerated by even the most sensitive skin, like the skin of patients suffering from rosacea<sup>1,2</sup>.

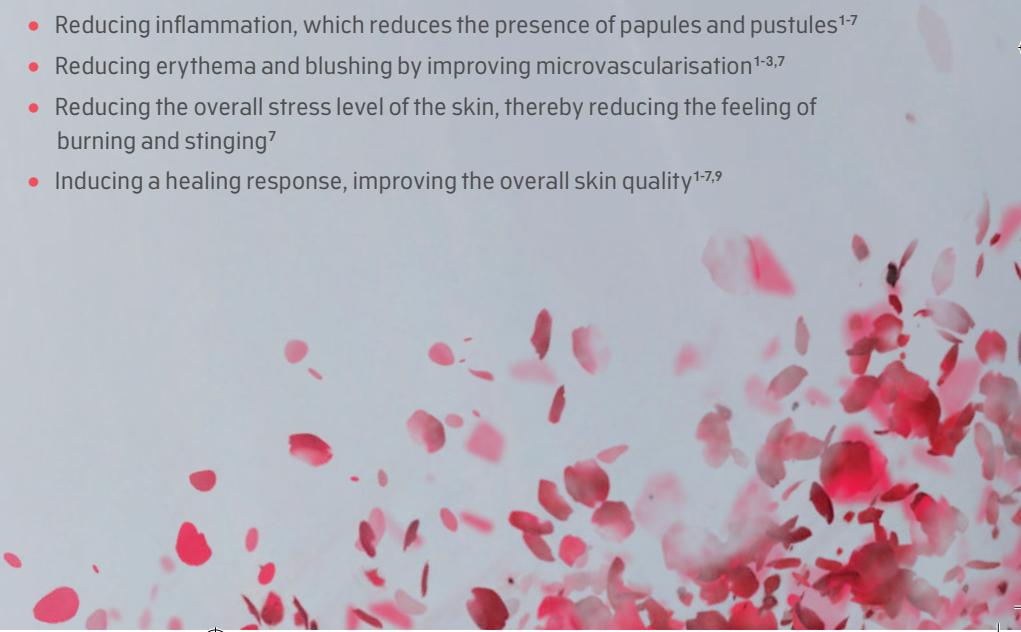

Based on a new technology in the field of dermatology, Kleresca® Rosacea Treatment uses fluorescent light energy (FLE) to stimulate the skin's own repair mechanisms<sup>8</sup>.

Demonstrating high safety and efficacy<sup>1-7</sup>, this unique treatment helps by:

- Reducing inflammation, which reduces the presence of papules and pustules<sup>1-7</sup>
- Reducing erythema and blushing by improving microvascularisation<sup>1-3,7</sup>
- Reducing the overall stress level of the skin, thereby reducing the feeling of burning and stinging<sup>7</sup>
- Inducing a healing response, improving the overall skin quality<sup>1-7,9</sup>

The difference is in the fluorescence

Kleresca®

# SKIN REJUVENATION REIMAGINED

Transforming skin from within

## BOOST THE SKIN'S NATURAL GLOW

Kleresca® Skin Rejuvenation is a non-invasive biophotonic treatment designed to rejuvenate the skin comfortably and with little to no downtime<sup>1-8</sup>.

The scientifically documented technology stimulates the skin's own biological processes to improve the patient's complexion and overall skin quality<sup>1-8</sup>. The treatment works by:

- Inducing collagen production<sup>1-6</sup>
- Improving skin texture and natural glow<sup>13-15</sup>
- Reducing pore size and fine lines<sup>1,4</sup>
- Reducing signs of scars<sup>1-5</sup>

Kleresca® Skin Rejuvenation has been shown to continue improving the skin quality even after the course of treatment has been completed<sup>1-4</sup>.

## WHAT TO EXPECT

- Long-lasting, noticeable improvements to the skin<sup>1-3</sup>
- Little to no downtime<sup>1-8</sup>
- A pleasant and comfortable treatment<sup>1-6</sup>
- Some patients have reported an immediate effect after one treatment

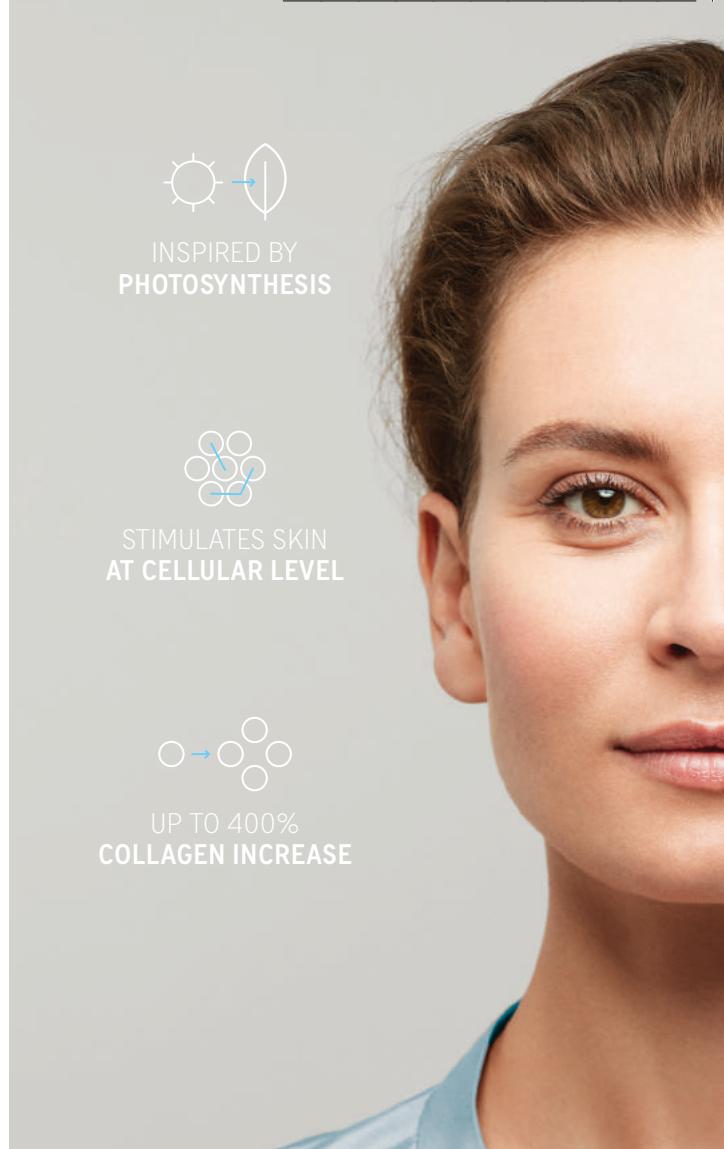

INSPIRED BY  
PHOTOSYNTHESIS

STIMULATES SKIN  
AT CELLULAR LEVEL

UP TO 400%  
COLLAGEN INCREASE

## THE DIFFERENCE IS THE FLUORESCENCE

The treatment is based on a new mode of action in the field of dermatology, using fluorescent light energy (FLE) that stimulates the skin's own repair mechanisms at a cellular level<sup>1-8</sup>. This process is known as photobiomodulation (PBM)<sup>7,8,10-12</sup>.

The mode of action of the treatment is based on the interaction between the Kleresca® photoconverter gel and the blue light from the Kleresca® Lamp<sup>8</sup>:

The photoconverter gel absorbs blue light from Kleresca® Lamp

Cromophores in the gel convert this into fluorescent light energy (FLE)

Photobiomodulation is initiated, stimulating the skin at the cellular level

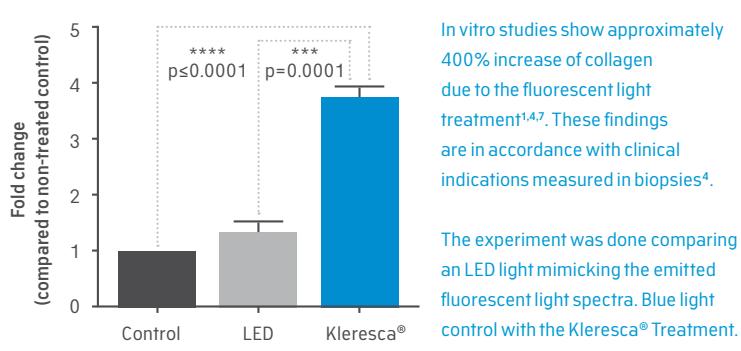

Kleresca® Skin Rejuvenation is designed to rejuvenate the skin comfortably, promoting the build-up of collagen and providing an improved skin texture and natural glow<sup>13,14</sup>.

## DOCUMENTED RESULTS

At Kleresca®, we aspire to transform the way skin is treated with a non-invasive and non-systemic platform.

Scientific studies have shown favorable effects of the treatment, including the stimulation of human fibroblast proliferation and increased collagen deposition<sup>4,7,8</sup>.

## EFFECT WITHOUT COMPROMISE

Kleresca® Skin Rejuvenation has a high safety profile. Side effects - seen in some patients - are all non-permanent and may include redness, swelling and hyperpigmentation (bronzing of an area of the skin)<sup>1-3,5-7</sup>. Side effects impact patients differently depending on skin type, so we always recommend talking to your patient before beginning treatment.
